

No IT resources required

Now it's easier than ever to leverage the most powerful and flexible loan servicing system in the business.

Nortridge Loan System (NLS), available through our SaaS platform, helps you stay focused on what really matters in your business: portfolio performance.

What is SaaS?

Software as a Service (SaaS) is a model of software usage where the application itself is hosted by a professional third-party data center and delivered as a service to customers via the Internet. Also referred to as "hosted" or "ASP," SaaS eliminates the need to install and run an application on the customer's own computer or server.

As such, SaaS alleviates the customer's burden of software maintenance, ongoing operation, and support.

With NLS — SaaS, you get all of the benefits of using NLS without having to manage the application or associated hardware and networking. Also eliminated are the many security and data backup and recovery issues commonly plaguing today's business technology environment.

Our clients also like the idea of paying a monthly fee per seat instead of paying upfront licensing costs.

Why SaaS?

The SaaS model replaces yesterday's costly and inefficient on-premise model requiring the purchase of software licenses, additional computer processing power and storage, and adding in-house technical expertise. According to information technology research firm Gartner, "The traditional, on-premise model for application delivery is stagnant, with software as a service gaining popularity as an alternative delivery model." (Source: Gartner: *Six Business Challenges of SaaS for ISVs*, August 30, 2007)

SaaS, on the other hand, provides users access to software without the licensing costs, Information Technology (IT) management headaches, and associated technology hardware support costs.

Benefits

As a Nortridge SaaS customer, you'll eliminate IT costs and worries related to:

- Licensing
- Managing dedicated hardware
- Hardware upgrades and maintenance
- Data backup and recovery systems
- New software releases and upgrades
- Security patches
- IT staffing

Our Platform

In order to make NLS available as SaaS, we have carefully chosen to partner with a company that operates a world-class datacenter. NLS is hosted on a fully redundant hardware platform at the natural disaster-resistant and SAS 70 Type II audited CyberTrails datacenter in Phoenix, AZ. The datacenter features biometric access points and closed-circuit TV-monitored security, an Uninterruptible Power Supply, (UPS) HVAC, fire detection and suppression and 24X7 onsite technical staff — all of the critical things that help protect the information and applications entrusted to them by their customers.

This highly resilient network provides secure and speedy performance.

It also means that your application and loan databases are backed by the best and brightest in the information technology industry.
